Yoshua Kock

## What is this project about

This project is about making a fully developed website for Monkshop, more specifically for the climbing shoes. Our task is to integrate in the existing website our own version of the pages for the shoe selection and ordering.

## Requirements

- A filtering system to make finding the perfect shoe easier
- Descriptions on the details of the climbing shoes

First step: Project Plan Deadline: 12th November

Second step: High-fidelity prototypes by 22<sup>nd</sup> November

Third step: User testing with prototype 25<sup>th</sup>-27<sup>th</sup> November

Fourth step: Code it as a fully developed website 28<sup>th</sup> – 9<sup>th</sup> December

## Planning:

1. Research important areas for the shoe filtering system
2. Continue the Figma prototype
3. Make prototype interactive for user testing
4. Get feedback from user testing
5. Create database with node JS and SQL lite 3
6. Code the prototype into a full website
7. Present work to Monk

## What we need to research:

- Technical details that customers should look into when purchasing climbing shoes (e.g. types of rubber soles, if it's heel fit, etc.)
